The Global Energy Crunch

As the world ramps up production after nearly two years of COVID, energy shortages are sweeping countries throughout Asia and the globe.

Prices in all areas including gas, coal and petroleum have skyrocketed. Energy supply shortages have resulted in factory closures and begun to affect consumers' daily energy consumption. This rapid deterioration has aroused worldwide concern over the post-pandemic economic recovery.

Join our panel of energy experts for a discussion related specifically to the energy crisis in China and India and the global implications. Our experts will discuss the market dynamics and long-term consequences behind this global phenomenon as well as the economic impact and countermeasures from countries to stave off further global economic catastrophe.
