Hybrid Talk | Using Games to Tackle Wicked Problems and Make Worlds
利用遊戲解決難題並創造世界

November 14, 2023 | 7:00pm HKT

Patrick Jagoda
The University of Chicago

This talk explores ways that gameplay and game design help us think about some of the most pressing issues of our time — from climate change to the spread of emerging infectious diseases. Following an overview of the concepts of “serious games” and “critical making,” **[Professor Patrick Jagoda](#)** offers a series of four cases of digital, analog, and mixed reality games that he co-directed and created at the University of Chicago across several labs, including the Game Changer Chicago Design Lab, the Fourcast Lab, and the Weston Game Lab.

"Worldbuilding" is the process of conceptualizing an internally-consistent setting, which we see in fiction, film, television, design, and games across genres that include science fiction, fantasy, horror, and more. Worldbuilding involves not only imagination, but also the organizational and logistical work of making a world believable and inhabitable.

The workshop will use a method from some of our speakers' work, which involves creating game rule sets for imagined worlds, as a way of imagining alternatives to the present world. Participants will gain experience in the fields of speculative design and game design as they operate in the arts, creative writing, and humanistic fields.
